

TRAISSR Announces 3.6.0 Release with Major Asset & Infrastructure Management Solution Advances to Empower Local Agencies

FORT WASHINGTON, PA – Oct. 3, 2016 – TRAISSR®, a proven, web-based GIS solution designed to help local agencies manage assets and infrastructure, today announced a major solution upgrade with the release of version 3.6.0. This version includes enhancements in all eight modules of the TRAISSR solution which are automatically available for all users of the system. It also includes a number of bug fixes that improve solution performance.

“We continually strive to bring innovative solution enhancements to our new and existing clients,” said Brian Berdel, Chief Information Officer for TRAISSR. “Our initial solution footprint was built on decades of serving our municipal clients with customized solutions. Now, with several years of solution use in the field, we’ve been able to incorporate much needed advancements into our system and deliver a modern GIS solution geared specifically for empowering the local agency market.”

Some of the enhancements include:

Asset Centrl

- Ability to map a work order data field to an asset data field. As information is updated in the work order it automatically transfers that data to the associated asset. This also has been included in the Work Centrl module
- Dynamic polygon labels
- Updated document section to allow for non-url friendly names
- Various feature layer improvements

Work Centrl

- Enhanced reporting
 - Solution now allows for additional filtering and displaying of all attributes of an associated work order
- Dynamic data column names
- Asset dashboard now displays the most recent work orders at the top of the list
- Data filter can now filter on start date, or the first date in the work order

Permit Centrl

- Users now have the ability to filter permit costs/fees
- New contractor drop down list type
- Updated inspection scheduling capabilities
- Dynamic date column names

General Reporting

- Various client-specific reporting updates

About TRAISSR

TRAISSR was designed by McMahon Associates, Inc. a respected leader in transportation engineering and planning since 1976. The solution’s genesis can be traced back decades to helping our customers by developing customized applications for the management of day-to-day operations. We took all of this accumulated knowledge, based on in the field, end-user feedback, to create a web-based, GIS cloud solution that
